case study

*The 1500D's motor blower operates at an extremely quiet 42 dba, yet delivers up to 1500 CFM of air flow.*

*A 1500D concealed above the VFW facility's ceiling.*

**APPLICATION:**

A 6,700 square-foot facility, began to experience declining attendance levels due to a constant, smoky haze inside the building. People's eyes were burning and there was a layer of smoke all through the building. The facility was equipped with a series of table-top smoke collection devices but these according to club principals, "... just blew the smoke back in our faces."

**SOLUTION:**

The VFW committee met with their local distributor who recommended the installation of 4 x 1500D and 1 x 1000D commercial air cleaning units specially designed to collect and condition air, removing smoke, odor, and dust before returning clean air to the building. The system was completely concealed, to preserve building aesthetics.

**PRODUCT DESCRIPTION:**

4 x 1500D Ducted Filtration Units  
 1 x 1000D

**INDUSTRY:**

Commercial Organization

**TESTIMONIAL:**

The results have been positive. Meetings and special events now regularly fill the 250-seat facility and guests no longer leave early. "You can really see it working. Business has increased 50 to 65%. It works so well that guests have noticed they aren't going home with a smoky smell on their clothing."
